CSE 4228: Assignment-1 Fall 2022

Slicing Image and Rotating 90 Degree

Following steps should be performed:

- 1. Took two input pictures.
- 2. Took a blank image.
- 3. Divided the blank image into 6 rows.
- 4. Replaced the odd rows with the portion of the first image and even rows with the portion of the second image.
- 5. Then rotated the picture by 90 degrees without using built-in function

The output is shown in the image below.
