

Motivation Concepts

motivational penguin

Management by Robbins & Coulter, Chapter 16 (11th Edition)

Motivation is a process
that accounts for an individual's
intensity, direction, and **persistence** of effort
toward attaining a goal.

how hard a
person tries

Intensity

where a person
channels his
effort

Direction

how long a
person maintains
effort

Persistence

Early Motivation Theories

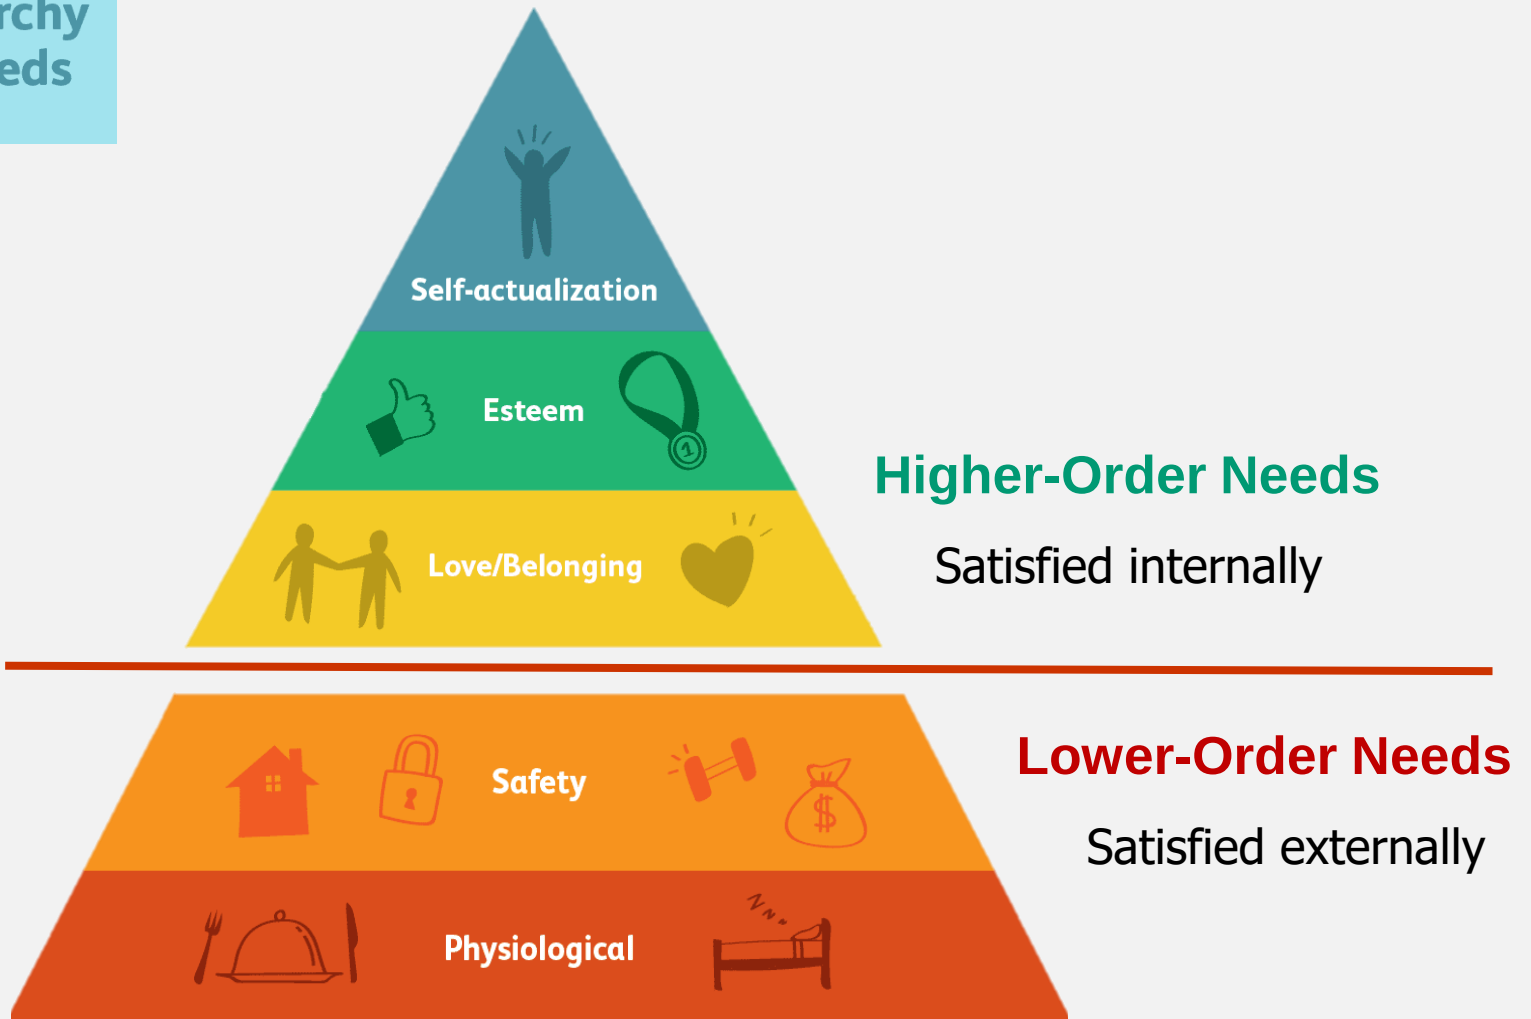

- 1. Maslow's Hierarchy of Needs**
- 2. Mc Gregor's Theories of X and Y**
- 3. Herzberg's Two Factor Theory**
- 4. Mc Clelland's Three Needs Theory**

Maslow's Hierarchy of Needs

Maslow's Hierarchy of Needs

Maslow's Hierarchy of Needs

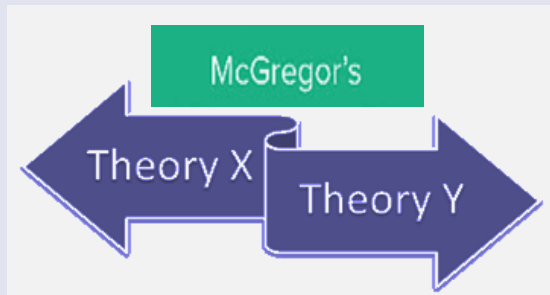

Individuals must move up the hierarchy of needs.

Individuals get motivated by the very basic needs first and most strongly.

As each need is substantially satisfied, the next need becomes dominant.

**Have Little
Ambition**

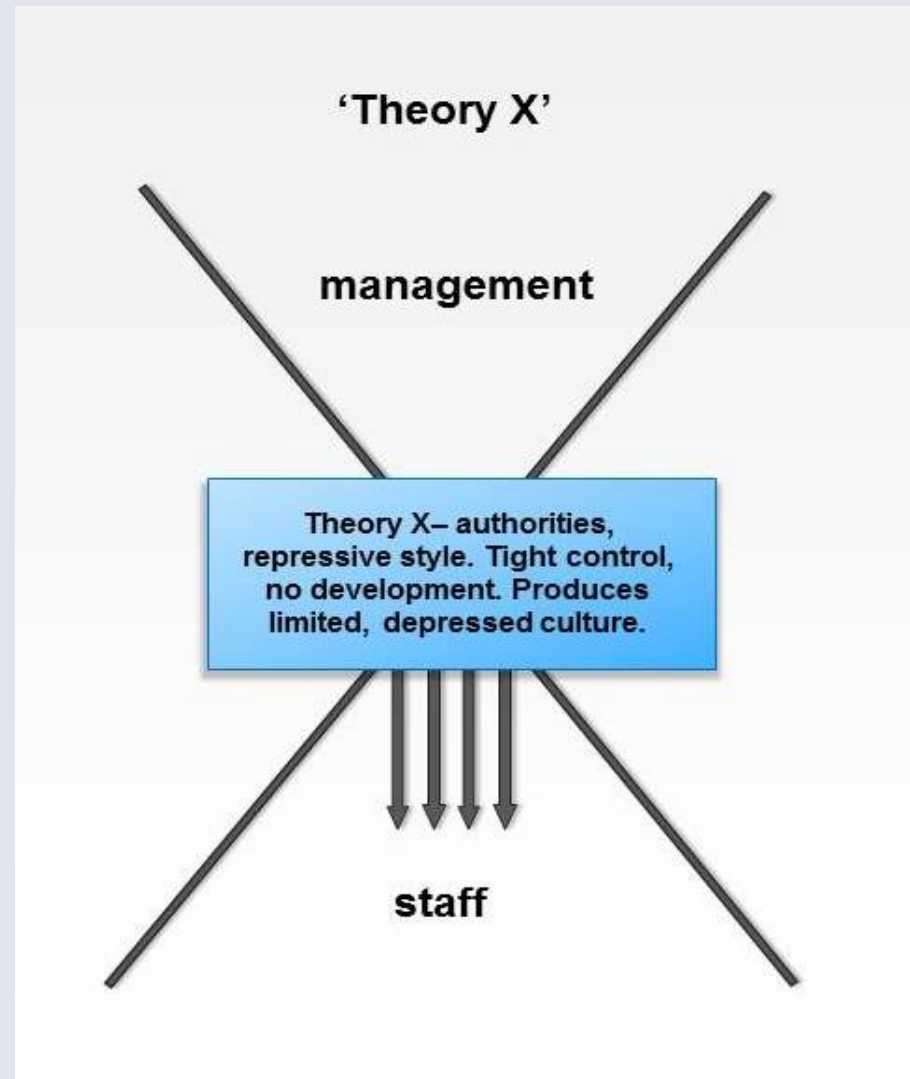

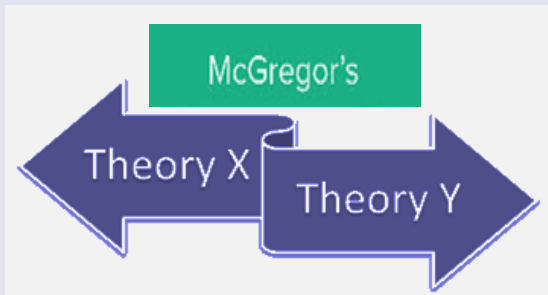

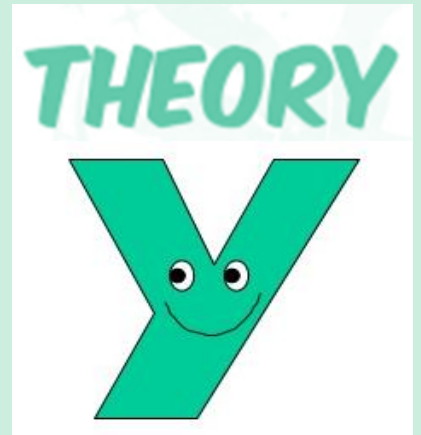

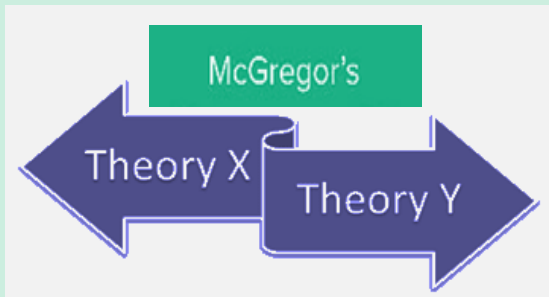

**Dislike
Work**

**Avoid
Responsibility**

**Enjoy
Work**

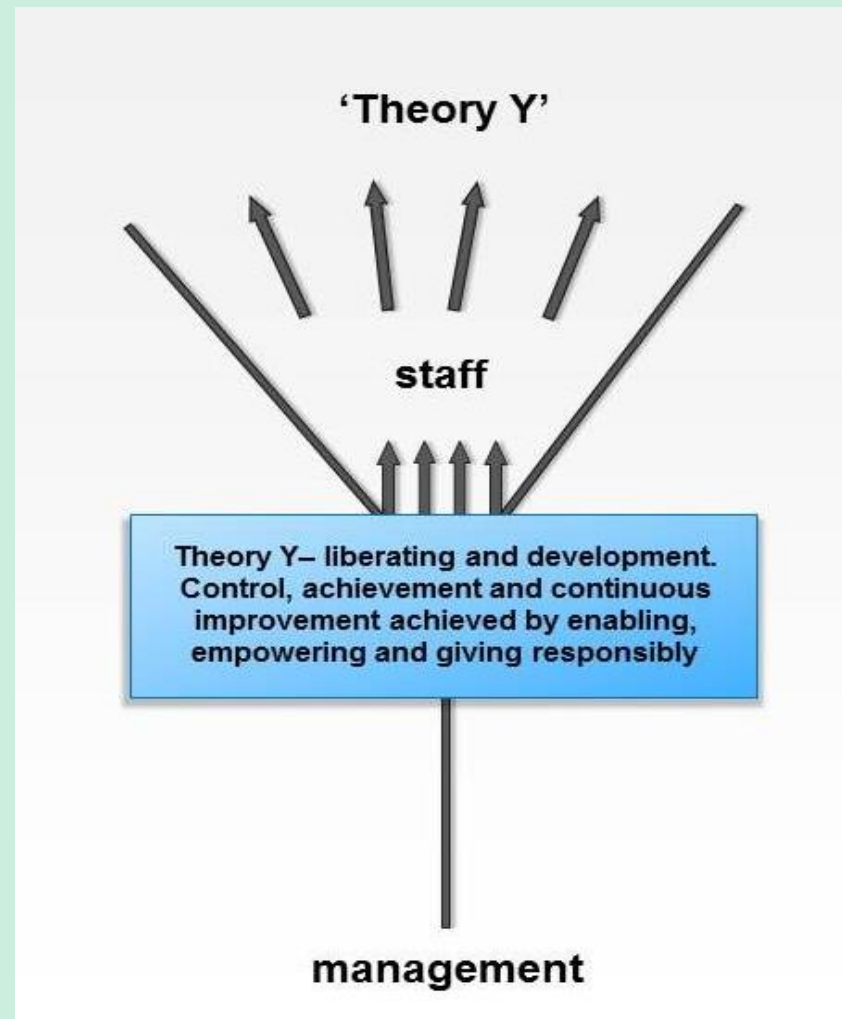

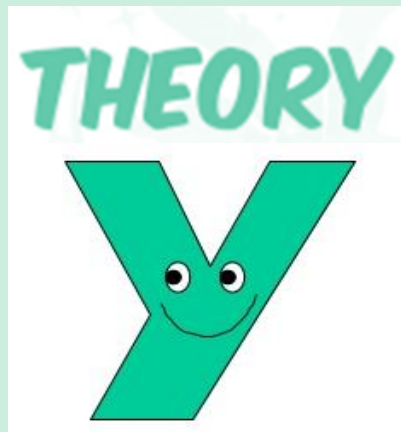

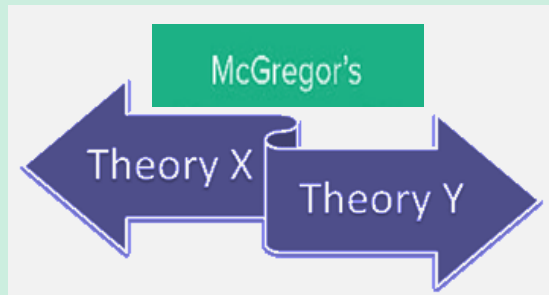

**Accept
Responsibility**

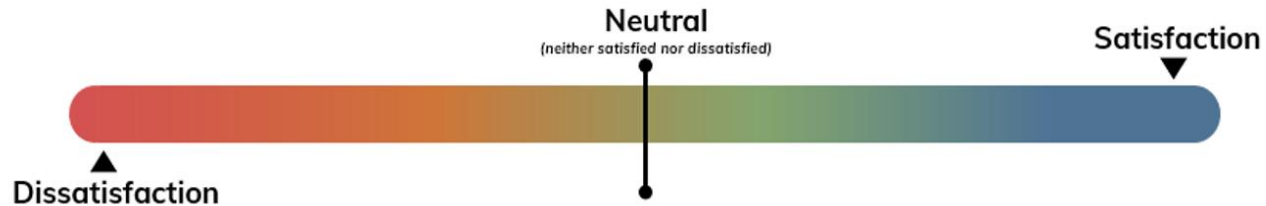

**Exercise Self-
direction**

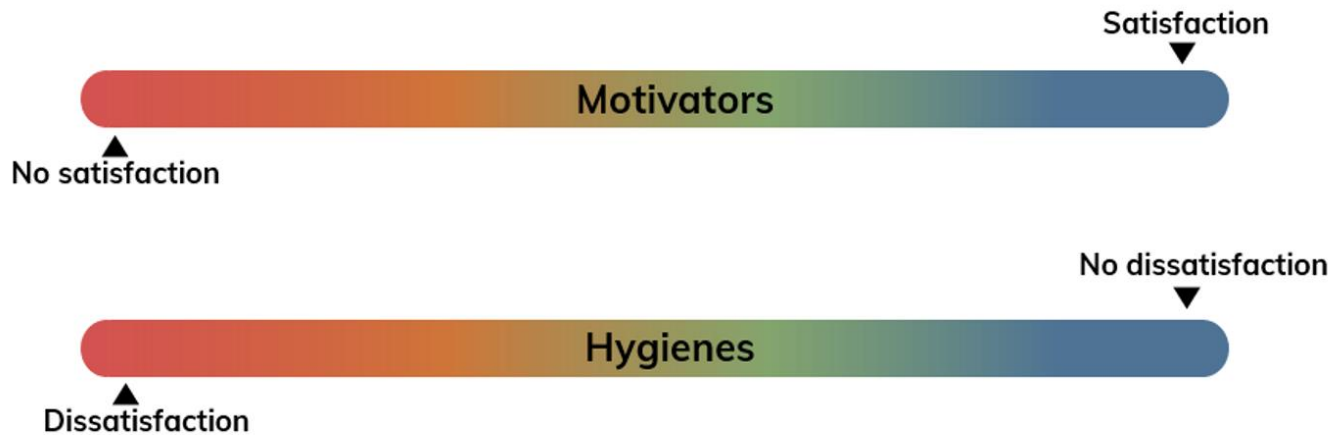

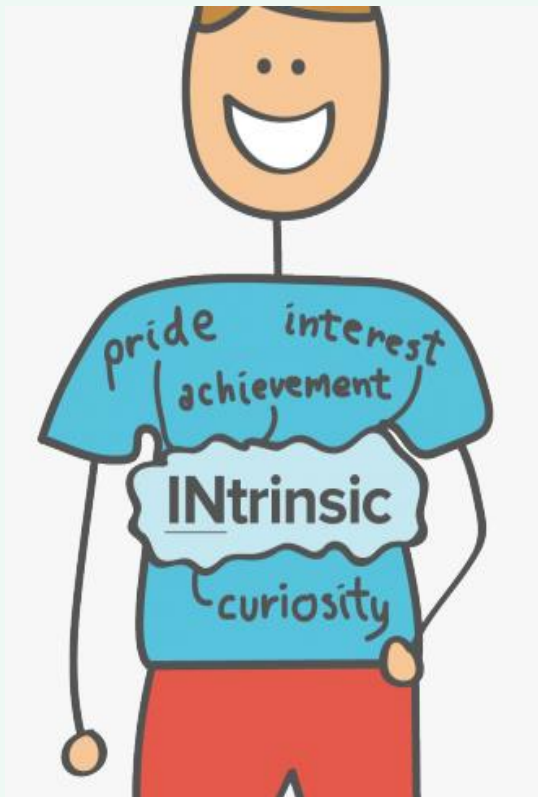

Traditional View

Herzberg's View

Intrinsic Factors

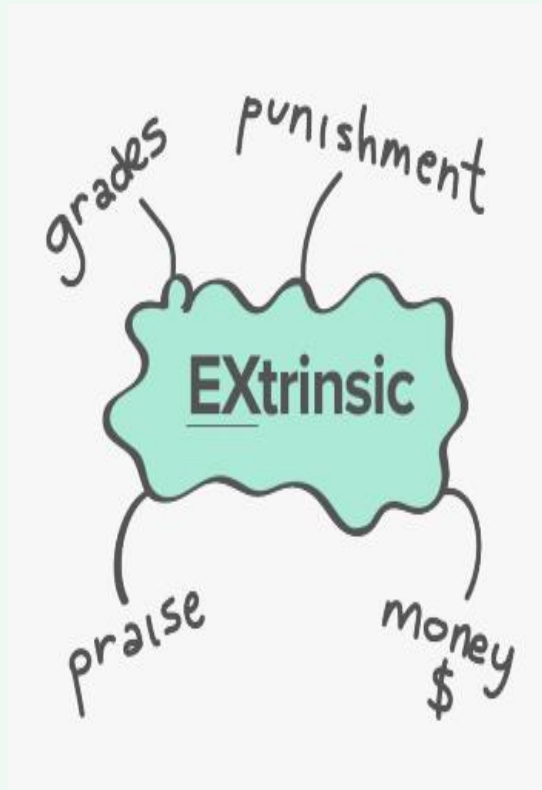

JOB SATISFACTION

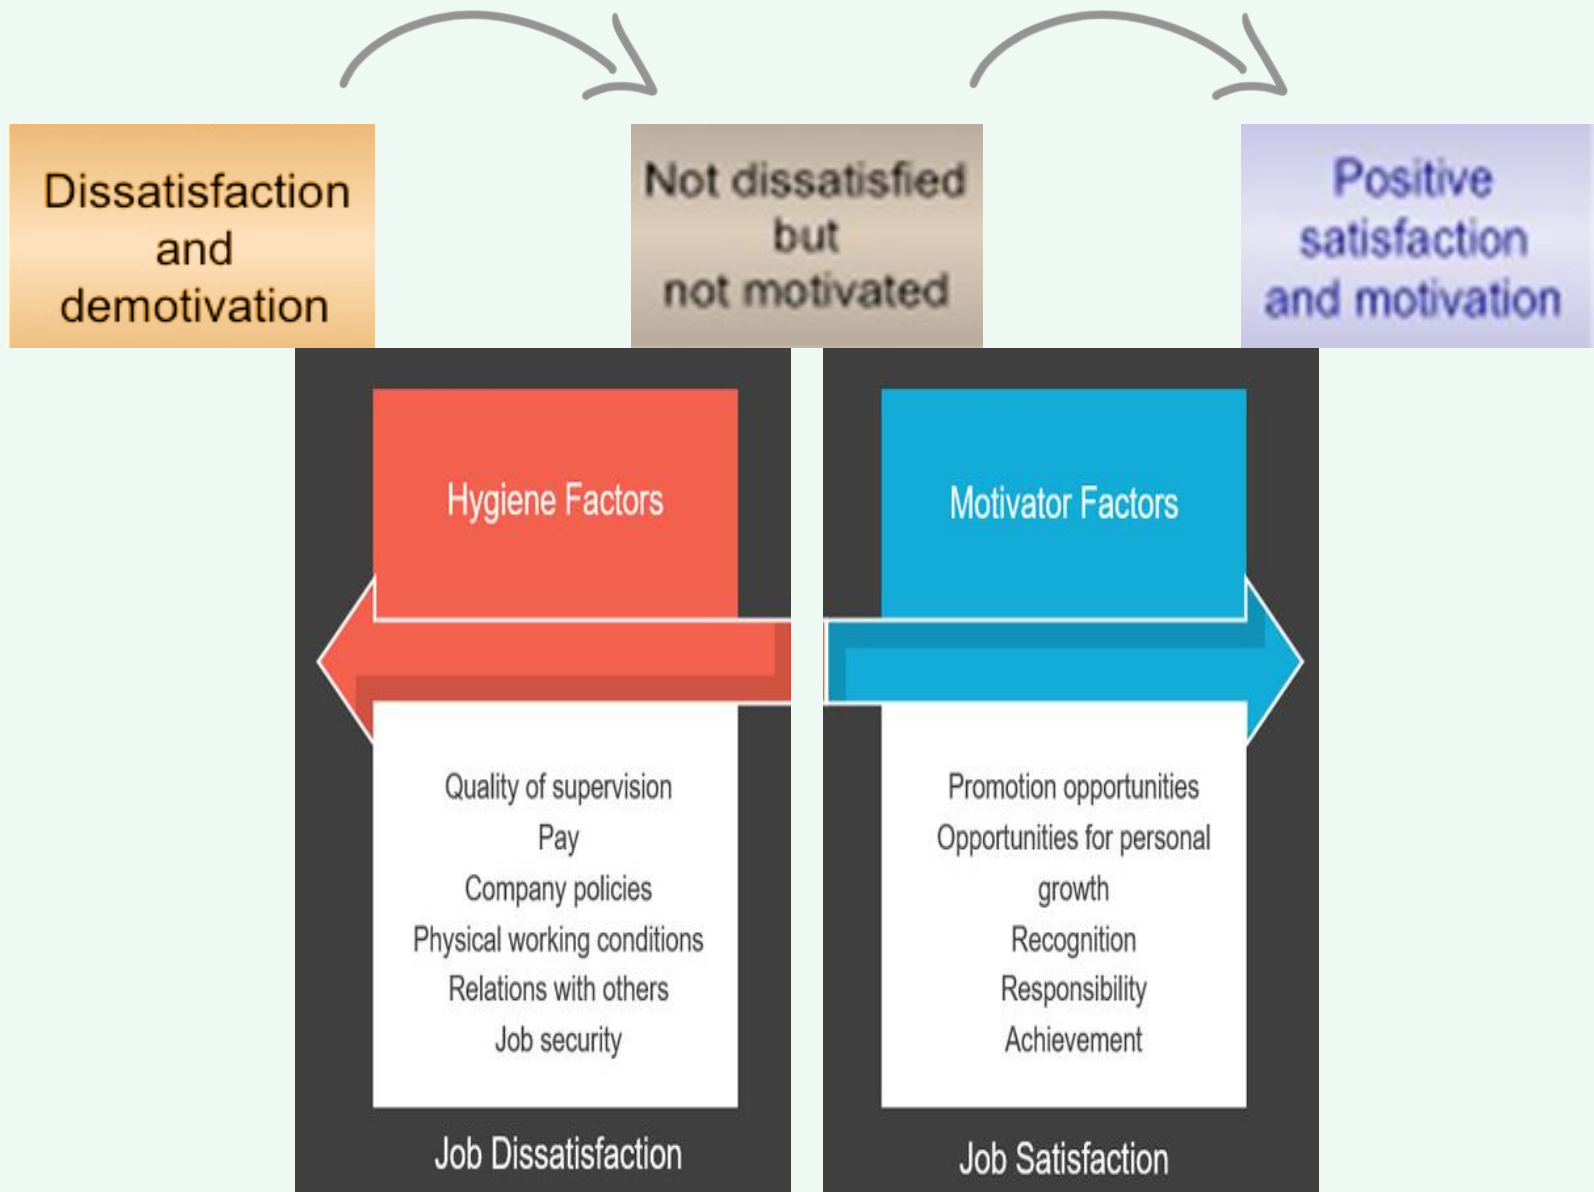

Motivator Factors

Extrinsic Factors

Hygiene Factors

What motivates you?

David McClelland's Three-Needs Theory

Need for Achievement

Drive to succeed,
to achieve in relation
to a set of standards.

Desire to influence,
teach or encourage
others.

Need for Power

Need for Affiliation

Desire for
friendly and close
personal
relationships.

Individuals have different levels of needs in each of these areas, and those levels will drive their behavior or the way to be motivated.

David McClelland's Three-Needs Theory

Need for Power

Desire to influence, teach or encourage others.

Need for Affiliation

Desire for friendly and close personal relationships.

Need for Achievement

Drive to succeed, to achieve in relation to a set of standards.

Bottom Line:

Individuals have different levels of needs in each of these areas, and those levels will drive their behavior.

Achievers prefer jobs that offer

Personal responsibility

Feedback

Moderate risks

Goal-Setting Theory (Edwin Locke)

I CAN DO IT,
I WILL DO IT

Reinforcement Theory

Argues that behavior is a function of its consequences.

Reinforcement Theory
includes 4 aspects:

- Positive reinforcement
- Negative reinforcement
- Punishment reinforcement
- Extinction reinforcement

Assumptions:

- Behavior can be modified (reinforced) by providing consequences.
- Reinforced behavior tends to be repeated.

Equity Theory

Individuals compare their job inputs and outcomes with those of others and then respond to eliminate any inequities.

Ratio Comparisons*	Perception
$O/I_A < O/I_B$	Inequity due to being underrewarded
$O/I_A = O/I_B$	Equity
$O/I_A > O/I_B$	Inequity due to being overrewarded

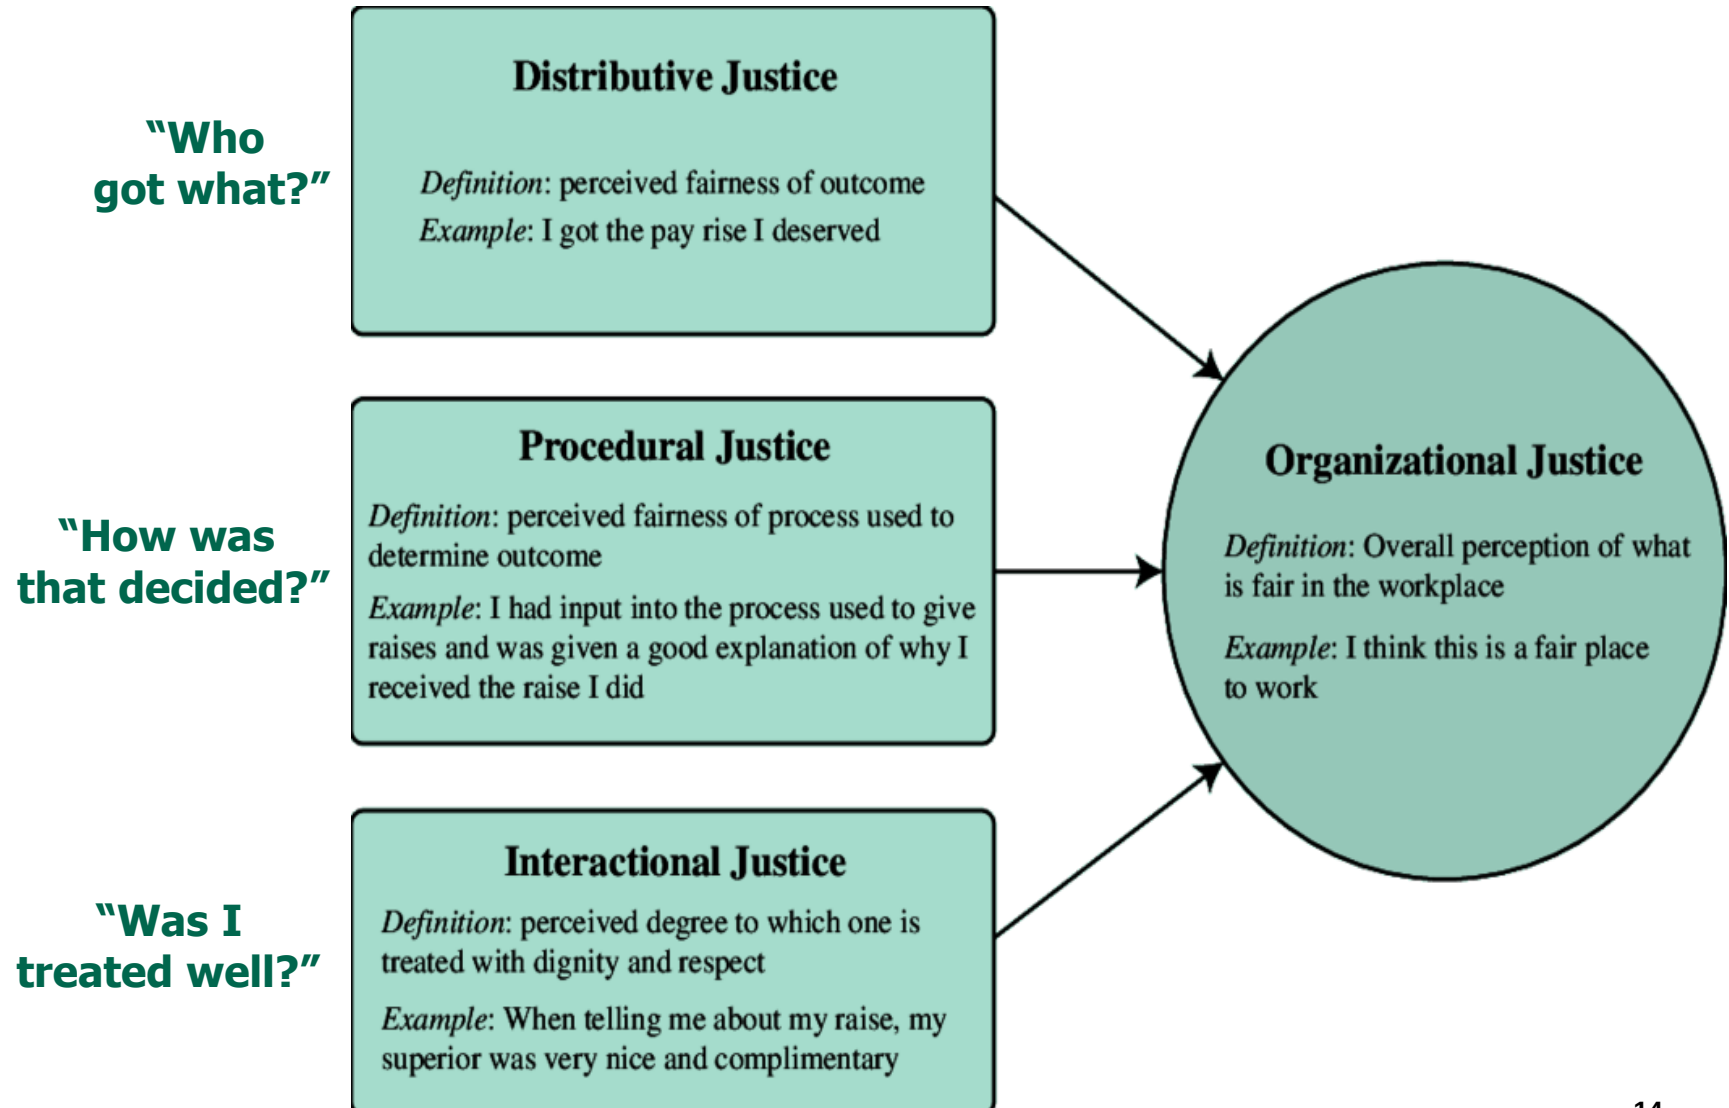

*Where O/I_A represents the employee; and O/I_B represents relevant others.

Equity Theory

Choices for dealing with inequity:

- 1. Change inputs**
- 2. Change outcomes (increase output)**
- 3. Distort/change perceptions of self**
- 4. Distort/change perceptions of others**
- 5. Choose a different referent person**
- 6. Leave the field (quit the job)**

Justice and Equity Theory

Expectancy Theory

All three links between the boxes must be intact; otherwise motivation will not occur. Thus,

- Individuals must feel that if they try, they can perform
And
- If they perform, they will be rewarded
And
- When they are rewarded, the reward will be something they care about
